

What is PII?

Personally identifying information (PII) is information that uniquely identifies an individual when combined with the individual's name. Without an accompanying name, most potential PII is harmless, but some PII is considered sensitive without an accompanying name.

Examples of PII include:

- Social Security Number (SSN)
- Sensitive Employment Information (i.e. Disciplinary Actions, Performance Reviews)
- Place of Birth
- Personal Financial Information
- Date of Birth
- Personal or Business Credit Card Numbers
- Mother's Maiden Name
- Personal or Business Bank Account Numbers
- Biometric Record (i.e. fingerprints, iris scan, DNA & genetic testing)
- Security Clearance History or Related Information (does not include types of clearances held)
- Medical History Information (i.e. medical conditions, weight, height, blood pressure)
- Individual Criminal History

The following **are not** generally considered PII. If you have any concerns about sharing your non-PII details, please contact a USDA agency representative.

- An Individual's Name
- Occupational Titles & Responsibilities
- EIN/TIN as a Business Identifier
- Security Clearances Held
- Phone Numbers
- Publicly-Distributed Written Biographies (i.e. those used to introduce speakers, journalists, etc.)
- Street Addresses
- Academic Information (i.e. Credentials, Areas of Study)
- Email Addresses
- Digital Pictures
- Resumes (except those including SSNs)

Note on Publicly-Reported Occupational Information

Depending on your occupation (i.e. federal, state or local government employees, elected officials, and non-profit employees), additional details of your employment (current and historical) may be reported or available publicly, and therefore **not** considered PII. This may include salary information.

PII & ezFedGrants

During eAuthentication Registraton

You will be requested to provide PII during eAuthentication Level 2 Account registration and identity verification. This information is required because the ezFedGrants System (and other grants-related systems) are linked to USDA financial systems. Therefore, it is necessary to verify users' identities to reduce the chance of fraud within these financial systems.

While Using ezFedGrants

While managing your organization(s)' grants/agreements in ezFedGrants, you will enter information into standard forms and submit additional documentation in the form of PDF or Word files. Additionally, you may need to contact the ezFedGrants Help Desk or an agency representative with questions about the ezFedGrants System or the terms of your grants/agreements.

There is no reason to include PII in grants-related submissions or communications, because within ezFedGrants you are acting as a representative of an organization, not as an individual.

*Personally identifying information (PII) **should not** be included in ezFedGrants attachments, documents, or communications including, but not limited to, applications, emails, faxes, reports, and claims.*

Personally Identifying Information (PII) & ezFedGrants

Quick Reference

Removing or Masking PII

If you have a document or communication that includes PII, the easiest way to protect this information is to remove it. This can be achieved by:

- Deleting the PII text (recommended for Word documents and emails)
- Recreating the document without the PII and destroying the old version by saving-over, deleting, or shredding (recommended for PDFs and printed documents)

If you cannot remove the information, you can physically or digitally obscure the information by:

- Using permanent marker, opaque tape, or paper to block PII, and then scanning or photocopying the document with this information obscured. (This is the least secure method for handling PII, as the PII still exists on the original document. This method is only recommended if you have no digital copy or other method of recreating the document)
- Using document editing software to censor, encrypt, or password-protect documents.
